

HUZAIFA AHMED

AI Engineer | Full Stack Engineer | Generative AI Developer | LLM & Distributed Systems

huzafakashif2003@gmail.com | +92 335 9002666 | Pakistan

PROFESSIONAL PROFILE

AI and Full Stack Engineer specializing in intelligent software systems, Large Language Models (LLMs), Retrieval-Augmented Generation (RAG), scalable web platforms, and distributed architectures. Experienced in building production-grade applications by combining artificial intelligence, machine learning, modern frontend engineering, backend services, and cloud-native deployment practices.

EDUCATION

Bachelor of Science in Software Engineering

COMSATS University Islamabad

CGPA: 3.05 / 4.0

TECHNICAL EXPERTISE

- Artificial Intelligence: Generative AI, LLM applications, RAG pipelines, AI Agents, NLP, Computer Vision, Transformers, PyTorch, TensorFlow.
- Frontend: React.js, Next.js, Redux, Tailwind CSS, ReactFlow, ECharts, D3.js.
- Backend: Node.js, NestJS, Express.js, FastAPI, REST APIs, GraphQL, gRPC, WebSockets.
- Databases: PostgreSQL, MongoDB, Redis, MySQL, Neo4j, Firebase, Supabase.
- Cloud & DevOps: Docker, Kubernetes, CI/CD, GitHub Actions, Jenkins, AWS, Azure, Nginx.
- Streaming: Kafka, RabbitMQ, Event-driven architectures, real-time data processing.

PROFESSIONAL EXPERIENCE

Lean Automation | Software Developer | March 2025 – April 2026

- Designed and developed scalable full-stack applications using React, Next.js, Node.js, NestJS and Express.js.
- Implemented CI/CD pipelines using Docker and GitHub Actions for automated deployment workflows.
- Built real-time analytics dashboards for KPI monitoring, business intelligence, and operational insights.
- Developed AI-based content moderation systems for multilingual and code-mixed text analysis.
- Designed RAG-based AI assistants and intelligent retrieval systems.
- Integrated machine learning models into FastAPI services for real-time inference.
- Developed anomaly detection and predictive maintenance solutions using deep learning models.
- Built recommendation systems and personalized user experience solutions.
- Contributed to IoT microservice platforms using Kafka, Docker, and WebSocket communication.
- Mentored junior developers in TypeScript, architecture design, and database optimization.

SELECTED PROJECT EXPERTISE

- Generative AI Applications: LLM assistants, RAG systems, AI agents, contextual search and automation.
- Predictive Maintenance: Deep learning based anomaly detection systems for industrial applications.
- Real-Time Analytics: Interactive dashboards for monitoring and decision support.
- IoT Platforms: Distributed sensor processing and real-time monitoring architectures.

SOFTWARE ENGINEERING COMPETENCIES

- Software architecture and scalable system design
- API development and backend engineering
- Database design and optimization
- Machine learning deployment and AI integration
- Cloud-native application development
- Agile software development practices

COURSEWORK & CERTIFICATIONS

- Artificial Intelligence, Data Structures and Algorithms, Database Management Systems, Operating Systems, Distributed Systems.
- Generative AI for Everyone — DeepLearning.AI.
- Machine Learning Specialization — Stanford University.
- Google Data Analytics Professional Certification.
- Advanced Python & SQL Certification.
- LangChain Essentials and Agent Building.

CAREER OBJECTIVE

Seeking opportunities as an AI Engineer or Full Stack Engineer where I can contribute to developing intelligent applications, scalable software platforms, and innovative AI-driven solutions.
